

A histogram showing the frequency of the number of children per family. The x-axis is labeled 'Number of children' and ranges from 30 to 55. The y-axis is labeled 'Frequency' and ranges from 0 to 10. The bars represent the frequency of children in each bin. The distribution is unimodal and slightly right-skewed, peaking at 45 children with a frequency of 10.

Number of children	Frequency
30-35	2
35-40	2
40-45	4
45-50	10
50-55	8
55-60	2

A histogram showing the distribution of the number of correct answers for the first 10 questions. The x-axis is labeled 'Number shown (0-8)' and ranges from 0 to 8. The y-axis represents frequency, with a maximum value of 10. The bars are orange with black outlines. The distribution is right-skewed, with the highest frequency at 0 correct answers (approximately 10) and the lowest frequency at 4 correct answers (approximately 0.5).

Number shown (0-8)	Frequency
0	10
1	8
2	3
3	1
4	0.5
5	0
6	0
7	0
8	0

A histogram showing the distribution of 'Clusters per board'. The x-axis is labeled 'Clusters per board' and ranges from 3 to 10. The y-axis represents frequency, with grid lines at intervals of 1. The bars are green with black outlines. The distribution is unimodal and slightly right-skewed, peaking at 7 clusters per board.

Clusters per board	Frequency
3	1
4	2
5	4
6	10
7	12
8	8
9	7
10	0

A heatmap visualization showing the average number of mines in a 3x3 region for a 10x10 grid. The x-axis is labeled 'Column' and the y-axis is labeled 'Row', both ranging from 0 to 9. A color bar on the right indicates the 'Avg mines in 3x3 region' with a scale from 0.4 (dark purple) to 1.0 (yellow). The heatmap shows a diagonal pattern of higher values (yellow/orange) running from the top-left towards the bottom-right, with the highest concentration of mines (yellow) in the center-right area (columns 4-6, rows 4-6). The corners and edges show lower values (dark purple/black).

Avg mines in 3x3 region
